

# **DWR<sup>®</sup>**

## **Deck & Wood Brightener**

### **Description & Uses**

Organic Brightener & Neutralizer is a powdered, biodegradable product for brightening exterior, natural wood surfaces that have darkened, especially cedar and redwood, after using our cleaner or stripper. If this darkening is not acceptable, apply Brightener solution to lighten.

It is an environmentally safe product that provides excellent results economically. It does not contain any bleach, chlorinated solvents or any ozone depleting ingredients.

### **Preparation & Application**

Dissolve 8 ounces of Brightener in 1 gallon of warm water. Apply liberally by brush, roller or pump-style sprayer. Do not apply to hot surfaces or in direct sunlight. Apply to a cool, dry surface. On vertical surfaces, start from the bottom. Wait 10-15 minutes, agitate surface and rinse or power wash. If wood appears blotchy when dry, re-apply to achieve desired results.

Wait until surface is thoroughly dry before applying stain or clear protectant. Lightly sanding surface will remove residual wood fibers and help coating penetration and adhesion.

### **Coverage**

Coverage is approximately 200-250 square feet per gallon of solution.

### **Properties**

Appearance	White crystal
Odor	None
Flash Point	None

### **Packaged**

Brightener & Neutralizer is available in 8 ounce bags and 8 pound jars.

### **Safety and Handling**

For specific information, please refer to the label and material safety data sheet. Brightener & Neutralizer is an eye and skin irritant. Wear rubber or latex gloves and eye/face protection.

### **Storage and Shelf Life**

Store in a cool, dry place. Keep away from caustics. Shelf life is indefinite in closed containers. Refer to MSDS for additional information.
